Summary

As a driven and determined full-stack software engineer, I am passionate about tackling complex challenges and achieving ambitious goals. With a results-oriented mindset and a natural ability to lead and inspire others. I have a strong attention to detail, focus on optimizing processes, and am committed to delivering high-quality work.

Skills

- Python, JavaScript (express, react), SQL (PostgresSQL), HTML, CSS, MongoDB

Projects

Joystick Junkies - GitHub - Website - A social media site for people who love games.

- JavaScript, React, CSS, MongoDB
- Lead a team and organized the structure and planning of the project.
- Built an embedded database with MongoDB that securely stores users info and gave user control over changing sign in information. (username, password)
- Successfully launched on Heroku for backend and netlify for frontend.

Equestrian Organizer - GitHub - Website - a CRM for ranch handlers/owners/veterinarians

- JavaScript, Express, HTML, CSS, SQL
- Developed a database with tables for users, horses, and tasks to manage horse-related tasks and appointments.
- Implemented 3rd-party API for users to upload images and the Twilio API to send user text message reminders of tasks.
- Used SHA-256 hash for password and cryptoJS encryption for encoding.

Cave Explorer - GitHub - Website - an endless desktop survival game that replicates 8-bit

- JavaScript, HTML5, Canvas, CSS
- Created and used open-source images and audio clips to make the gamer experience more realistic.

Experience
